2. Processing Report

This report provides details on the processing steps carried out on the resource referred to above. This information is filled in by the same LR validator.

Processing action	Check if true	Comments
Does the processed resource originate from ELRC sources?		
Has automatic text extraction from scanned documents (via Optical Character Recognition – OCR) been performed?		
Has automatic text extraction from PDF or DOC(X) documents been performed?		
Has automatic document pair detection been performed?		
Has automatic sentence-level alignment been performed?		
Has TMX cleaning been performed?		
Have any other processing steps been carried out? If yes, list them in the columns to the right, one processing step per row (add further rows if needed)		The content was crawled by researchers at the NLP group of the Institute for Language and Speech Processing.

	Documents that are translations of each other were paired on the basis of their link information. After document pairing, segment alignments were automatically extracted. The dataset was provided as a TMX. The processing task included: conversion to a valid TMX (in accordance to the format specifications); several filters were applied to discard/annotate alignments that might be incorrect or of limited use for
